

## **Additions/Corrections to Selected Reference Tables**

Selected reference tables in the IHFS database recently had standards and guidelines established. When the data in some of the RFC Archive database tables were in common with the IHFS database tables, the same standards and guidelines were applied. The IHFS database standards were recently implemented at all WFOs and RFCs over the past few months (late 2002 thru early 2003) and as this implementation occurred some missing information and corrections were identified and changes were made accordingly to these standards. Changes that impact selected reference tables in the RFC Archive database were identified and are listed below.

Each RFC will need to make these changes accordingly prior to running the adbnit suite in order to reduce the errors that may occur when the location table is loaded.
